

KNZiN (كنزين) — Project Status & Completion Report

Source of Truth: مشروع تفاصيل KNZiN | Status: Core MVP Built (~40–45%) | Date: September 2026 | Prepared for: Stakeholders, Engineering & Investors

1 · Where We Stand — Built & Verified

KNZiN (كنزين) is an Arabic-first vocational micro-learning platform that sells short, job-ready trade courses and attaches a free promotional sweepstakes ticket (السحب تذكرة) to every purchase. The revenue engine — catalog, pricing, checkout and legal classification — is complete, audited and enforced end to end; what remains is the marketing surface that sells the inventory and the back-office that operates the draws.

Architecture & Core Stack

Next.js 16 — App Router + TypeScript	1 Laravel 11 — PHP REST API
MySQL 8 — 16-table schema	1 Bilingual AR / EN — RTL & LTR

✓ Course Catalog & Vocational Seeders Eight fully seeded trades: Auto Detailing, Phone Repair, Solar Installation, Freelance Design, HVAC, CCTV, Barbering, Barista.	✓ Modular Parts & Dual Pricing \$2 per part (1 ticket) or \$10 full bundle (15 tickets) — rate frozen at 1.3100.
✓ Frictionless Guest Checkout Email-only purchase — no password, no account wall. Dual-currency display in IQD and USD.	✓ Canonical Legal Shield Checkbox Mandatory consent text enforced verbatim in b and the Next.js UI before payment — classifies course purchase with a zero-cost promotional p
✓ Anti-Piracy Psychological Profiler Pre-checkout vocational survey (النفسي التخصيص محرك) plus a Personalization Stamp that commits content to the buyer's budget and trade — discourages piracy socially, not technically.	✓ Lesson Player & Navigation HUD Video seek, syllabus tabs, sticky header HUD (ي كورساتي) with live wallet and ticket counters, an

Verified position: the commercial and legal core is closed. A customer can browse, buy and legally receive a ticket today without any further engineering work.

2 · What Remains to Build & Launch Roadmap

The remaining 55–60% splits into two workstreams: the front-of-house that turns browsing into urgency, and the back-office that runs the draws, the money and the winners.

A · Marketing & Engagement UI

FRONT-OF-HOUSE — surfaced on the public site

- Live Social Proof Ticker (الحية الإشعارات شريط) — continuous scrolling purchase, bundle and countdown notifications.
- Active Draws Arena (السحوبات ساحة) — three live countdown cards: Factory Funding \$100,000, Project of a Lifetime \$50,000, Family Security \$500,000.
- Hall of Fame (الفائزين لوحة) — winner cards with name, country, prize value and the verifiable draw seed.
- “How It Works” modal (كيفية؟ تعمل كيف) — header pop-up: اختر السحب تابع → تذكرتك استلم → الكورس.
- The Hook (القصة) — home-page vision narrative: skill and capital must travel together.
- Floating WhatsApp support button — instant, site-wide customer care.

B · Business & Back-Office Engines

OPERATIONS — the systems that run the platform

- Affiliate & Influencer Engine (نظام الإحالة نظام) — co-share, smart referral links with embedded Influencer Dashboard (earnings, per-link stats).
- Admin Management Panel (الإدارة تحكم لوحة) — draw counters, electronic RNG draw button, m (الدفعه تسديد) with Western Union receipt upload system.
- Payment Gateways & Reconciliation — ZainCash server-to-server webhooks with idempotency settlement of payments lost to dropped connections.
- Automated Notifications (الإشعارات نظام) — a recovery by email and WhatsApp, winner alert new-prize broadcasts.
- Ticket Serials & Winner KYC — unique ticket persisted per order, and mandatory identity verification prize is released.

3 · Strategic 3-Phase Roadmap to Launch

1

Marketing HUD & Draws UI

Category A — fast, low risk

- Ticker, draw arena and Hall of Fame live.
- “How It Works” modal and The Hook copy.
- Floating WhatsApp support button.
- Outcome: existing course inventory becomes visible urgency.

3

Admin Panel, Payments & Launch

Back office — go live

- Admin panel, RNG draw button, payout zeroing, fraud bans.
- ZainCash / AsiaHawala webhooks + reconciliation engine.
- Notification engine and winner KYC.
- Outcome: the platform can take real money and pay real winners.

Launch gate: the phases run front-to-back for a reason — Phase 1 makes the catalogue sell, Phase 2 makes it travel, and Phase 3 makes it payable. Nothing in Phase 1 or 2 can be monetised before the webhook-to-draw-to-KYC chain in Phase 3 is proven in test mode.
